

Send crystal clear heart sounds anywhere

Business as usual

Many patient exams start with the use of a stethoscope. GlobalMedia's ClearSteth™ allows you to continue your normal exam routine by receiving or sending crystal clear heart/lung sounds anywhere over the Internet via broadband connection.

Videoconferencing

Using popular soft codec video conferencing applications such as GlobalMedia's EasyShare®VC or Polycom®PVX, the ClearSteth is a complete auscultation kit. This easy-to-operate stethoscope will help you extend your reach by monitoring patients remotely. ClearSteth integrates with many videoconferencing systems flawlessly.

Easy to use

The ClearSteth makes transmitting heart and breath sounds easy, and the sounds are refined with the use of headsets. A practitioner even has the ability to control sounds using the bell and diaphragm buttons to hear the deep bass of a heartbeat or the higher frequency of respiration. The volume is easily adjusted with the control box dial.
